

AMIAD FILTRATION SYSTEMS

Amiad SCANAWAY Filters

For Semi-Automatic cleaning of Amiad Manual Plastic and Steel Filters

- ➔ Quick and efficient cleaning of manual filters. No need To open the filter.
- ➔ Regular scan-clean by turn-of-a-handle, does not require system shut-down or touching the filter inner parts.
- ➔ No additional head loss through the filter.
- ➔ Available as a retrofit assembly kit For use with existing Amiad filters from 2" and up To 14".

? How do the Scanaway filters work?

The SCANAWAY assembly consists of a hollow PVC or stainless steel pipe with suction nozzles that are facing the inner side of the screen. A handle connected To the suction scanner from the outside, allows turning the scanner in a spiral movement so that it rotates inside the screen surface without touching the screen. Opening the exhaust valve at the filter lid will create low pressure conditions, which cause the scanner nozzles To suck-in the dirt from the screen surface and expel the dislodged particles out through the valve. Scanning is done during the filtering process without having To stop the water supply.

3" T Plastic Scanaway Filter

8" In-Line Scanaway Filter
